

Shatter-Resistant Tube LEDs

Shat-R-Shield's Led Tubes are the easiest way to upgrade from conventional fluorescent lighting to energy efficient LEDs. These lamps fit into existing fixtures and are available in multiple power source options including plug & play and ballast bypass. The plug and play tubes are compatible with electronic instant start ballasts whereas the ballast bypass versions operate by sending line voltage directly to the lamp holders, providing a retrofit solution for T5, T8 or T12s.

Shat-R-Shield's Safety Coating is applied using Zero Gap Technology, meaning the skin tight plastic coating adheres directly to the lamp and leaves zero room for heat buildup that would otherwise deteriorate the material and jeopardize its ability to contain all glass if accidentally broken. The safety coating reduces light output by less than 1% and is guaranteed not to yellow, crack or flake for the rated life of the lamp.

Specifications:

- Models: T5 and T8
- Lumens: 1800 - 3200 lumens; up to 144 LPW
- CCT: 3500K, 4000K & 5000K
- CRI: 80+
- Length: 48"
- L70 > 50,000 Hours
- Warranty: 5 year limited

Certifications: DLC, cULus, NSF Splash Zone, RoHS
